

	<b>Longfin Damselfish</b>	<b>Dusky Damselfish</b>
<b>Features</b>	*Dark gray to black with yellowish brown hue on head and upper forebody. 1. Dorsal and anal fins extend beyond base of tail. 2. Thin bright blue edge on anal fin.	*Brown to dark brown. 1. Dorsal and anal fins extend only to insertion of tail fin rays into tail base.
<b>Habitat</b>	*Typically deeper water. Generally inhabit reefs between 15' and 80'.	*Shallower water. Inhabit shallow surgy reefs and rocky areas, rarely deeper than 20'.
<b>Behavior</b>	*More defensive.	*Relatively shy.
<b>Juvenile</b>	Yellow-gold. Brilliant blue lines run from snout across nape and down back.	Brilliant orange wash from snout across nape and about halfway down dorsal fin.

  

	<b>Beaugregory</b>	<b>Cocoa Damselfish</b>
<b>Features</b>	Usually dark spot on rear of dorsal fin. Rarely have spot on base of tail. Adults with 3 phases. a) Blackish and/or bluish gray with pale tail. b) Ditto, with brownish undertones and yellow tail base. Numerous small blue dots centered on scales. c) Bright yellow with orangish hue, brilliant blue upper.	Usually have spot on base of tail. *No eye crescents. Vertical dark bars (distinct) in all stages of life. Adults with 3 phases. a) Brown with yellowish undertones. 1. Dark scale outlines form net pattern. b) Brown dorsal fin and upper back, yellow below. 2. Dark scale outlines on upper body. c) Bright yellow with greenish hue. 3. Dark scale outlines form diagonal lines.
<b>Habitat</b>	Inhabit sand, grass and rocky coral rubble areas, occasionally reef tops. 3'-35'.	Found on reefs or nearby rubble areas. 15'-60'.
<b>Behavior</b>	Not as territorial as other damselfishes.	Territorial, but not always aggressive.
<b>Juvenile</b>	Same color pattern as c). Yellow. Dark spot near rear of dorsal fin.	Same color pattern of c) with no or short dark scale outlines; may be indistinguishable from juv. Beaugregory. Yellow with bluish wash.
