

Instructions for tubing attachment

1. Push a bit of the tubing through the lower right hand corner of the slate if you are right handed.

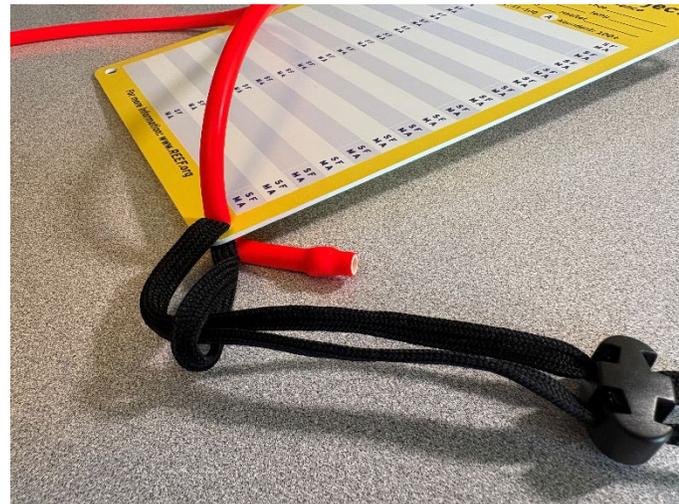

2. Using liquid or bar soap, get the bead, nice and soapy.

3. Insert the bead into the end of the tubing and push it through about a half an inch from the end.

4. At this point, reattach your wrist strap if you use one.

5. Soap up the eraser end of the pencil and work it into the other end of the tubing. Make sure the tubing covers the whole top portion of the mechanical pencil, so it doesn't slip off.
